

Veza Fast Facts

Mission

To help organizations trust confidently so they can unlock the value of their data.

Founded	March 2020
Co-Founders	Tarun Thakur, Co-Founder & CEO Dr. Maohua Lu, Co-Founder & CTO Rob Witcher, Co-Founder & Chief Architect
Location	Fully remote — we live by “talent has no boundaries;” HQ in Silicon Valley

About Veza

Veza is the data security platform built on the power of authorization. Our platform is purpose-built for multi-cloud environments to help you use and share your data more safely. Veza makes it easy to dynamically visualize, understand and control who can and should take what action on what data. We organize authorization metadata across identity providers, data systems, cloud service providers, and applications — all to address the toughest data security challenges of the multi-cloud era. Founded in 2020, the company is remote-first and funded by top-tier venture capital firms including Accel, Bain Capital, Ballistic Ventures, GV, Norwest Venture Partners, and True Ventures. To learn more, please visit us at veza.com.

Data Security Powered by the Authorization Metadata Graph

Tech leaders are under pressure from business leaders to share more data in the cloud, but doing so puts them at increased risk for data breaches. Veza provides the critical missing piece in cloud security: authorization. If you have no visibility or control over authorization, you can't be confident that only the right people have the right access to the right data.

Veza is a multi-cloud data security platform that helps companies visualize, understand and control who can and should take what action, on what data. The company's core technology is its Authorization Metadata Graph, which includes a streaming engine that integrates with multiple cloud identity, data, app, compute and infrastructure systems; an object model that organizes identities, relationships and granular data objects down to the column level; and a translation layer that processes system-specific permissions and converts them into effective permissions – all delivered as natural language.

Customers

Veza's customers include mid-and large-sized enterprises across multiple industries, including finance, hospitality, public safety, technology, and more. Notable customers include AMD, Medtronic, Best Western, Wynn Resorts and Intuit.

Veza Founding Story

In early 2020, our co-founders - Tarun, Maohua, and Rob - saw an evolutionary event coming in tech: The world's data was rapidly, irreversibly transitioning to the cloud. They called dozens of senior tech leaders and asked each one the same question: What is your biggest worry related to the data moving to the cloud? CIOs, CISOs and CDOs shared with them: "I don't understand who has access to our most sensitive data." It was shocking to them that no one in the industry has addressed this problem. They knew they had discovered a critical missing piece in data security: **authorization**. That insight led to the company vision: to build a data security platform that is built on the power of authorization metadata — all to address the toughest data security challenges of the multi-cloud era.

Competitive Differentiation

-  **Authorization Graph built for any system, any platform, any cloud**
-  **Data-centric approach to cloud security**
-  **Infinite Integrations and Open Authorization API (OAA)**
